

HPUICK Tournament Management System — App Workflow

This document illustrates how a team moves through the HPU Inter-College Kabaddi tournament system, from pre-registration to departure, and how the four committee roles fit together.

1. System at a Glance

A Progressive Web App (installable on any phone or laptop) talks to a single Apps Script backend, which reads and writes one Google Sheet acting as the database, and generates PDFs (receipts, coupons, certificates, orders) that can be emailed on the spot. Four roles — Admin, Registration, Mess, Accommodation — log into their own dashboard, each seeing only what their committee needs.

2. Team Journey: Pre-Registration to Receipt

Well before the tournament, a college submits a Google Form with its team's details, plus how the team is travelling. On opening day, the Registration Committee turns that into a paid, receipted team — a walk-in team with no pre-registration joins the same flow, just from a blank form.

Verification matters because pre-registered details sometimes change by the time the team arrives — the wizard opens pre-filled but every field stays editable, so the operator corrects anything that’s drifted before charging the team.

3. During the Tournament

Once registered, three committees serve the team independently from the same record, each seeing only their own slice of it — Mess never sees money, Accommodation never sees charges.

4. Departure and Final Settlement

Departure reconciles everything a team was charged, refunded, and issued across the whole tournament, and produces the two documents it takes home.

If Accommodation declines the NOC — a room key not yet returned, say — Departure simply cannot finalize until it's granted; Registration sees the decline reason directly on the team's own page, no extra screen to check.

Role Summary

Role	Owns
Admin	Rates & settings, committee accounts, reports, audit log
Registration	Pre-registration review, check-in, charges & payment, match fees, departure & final documents
Mess	Meal package sales, coupon scanning at each meal, food refunds
Accommodation	Room allocation, NOC issuance at departure

Every step above writes to the same Sheet, and every generated document is stored in Drive and logged — any action can be traced back through the Audit Log later.
